

N18 LINC[®] CEILING BATTEN

SAFE AND EASY

1 SOFT-FEED

Manufactured from a soft-feed material Nashco Ceiling Batten is different from other metal ceiling batten on the market. It is sturdier and less likely to puncture when fixing it with a framing gun. It is also easier to screw into - making sheeting the installed battens easier.

2 KNURLED SURFACE

N18 LINC[®] Ceiling Batten features a knurled surface that provides superior adhesion for plasterboard glue and makes it easier to screw sheets to.

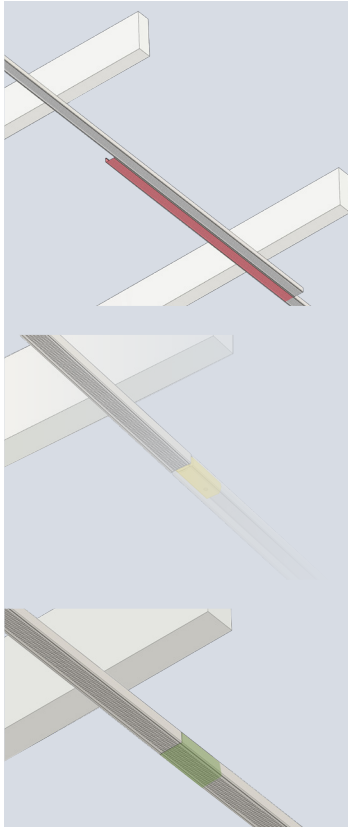

3 CONSISTENTLY HIGH QUALITY

N18 LINC[®] Ceiling Batten is manufactured in Australia. All products manufactured by NASHCO are designed and engineered in accordance with Australian Standards.
